

NWO BOUNTY HUNTERS

It's time they felt some pain

(whitepaper)

Introduction

NWO Bounty Hunters is the answer to a major problem.

How do you put a global "New World Order" cabal on its back foot? Like children you give them something to occupy their time completely. **Run You Son Of A Bitches!**

Thus the **NWO Bounty Hunter (NWOB)** token was born. This whitepaper will explain how the bounty game is developed, including anonymity, tokenomics, and gaming rewards. **The Hunted Becomes The Hunter.**

About NWO

Bounty Hunters

This game is so lifelike you'll think it's
100% REAL

NWO Bounty Hunters (NWOB) is a BEP-20 token used for our crypto rewards system for the game. The bounty hunter rewards ecosystem operates both in [Reality and Metaverse](#). This means that each transaction will have multiple major actions, high variable anonymity, and a proof of action checklist.

NWO Bounty Hunters (NWOB) is a token with genuine use case and real world utility. Every action in the game will be performed as an act of self-defense, against those who wish to harm the innocent who are unwilling or unable to defend themselves.

NWO Bounty Hunters (NWOB) smart contract has been audited by Techrate. Techrate is one of the leading auditors of blockchain smart contracts . We've taken special care to make sure there is as little risk as possible from digital threats performed by bad actors who may wish to disrupt the game.

Games Objective

PART I

The objective of NWO Bounty Hunters is to collect the representative uniquely identifiable token. This token is represented in the game through a digital bounty placed on members of the [New World Order](#). Anyone with the skills necessary is eligible to collect one of the coins with a nonfudgable identifier on the back, but only one coin will unlock the reward. Game targets are almost all high profile so if you must build a team to eradicate them from the game feel free, but only one real world coin can be redeemed.

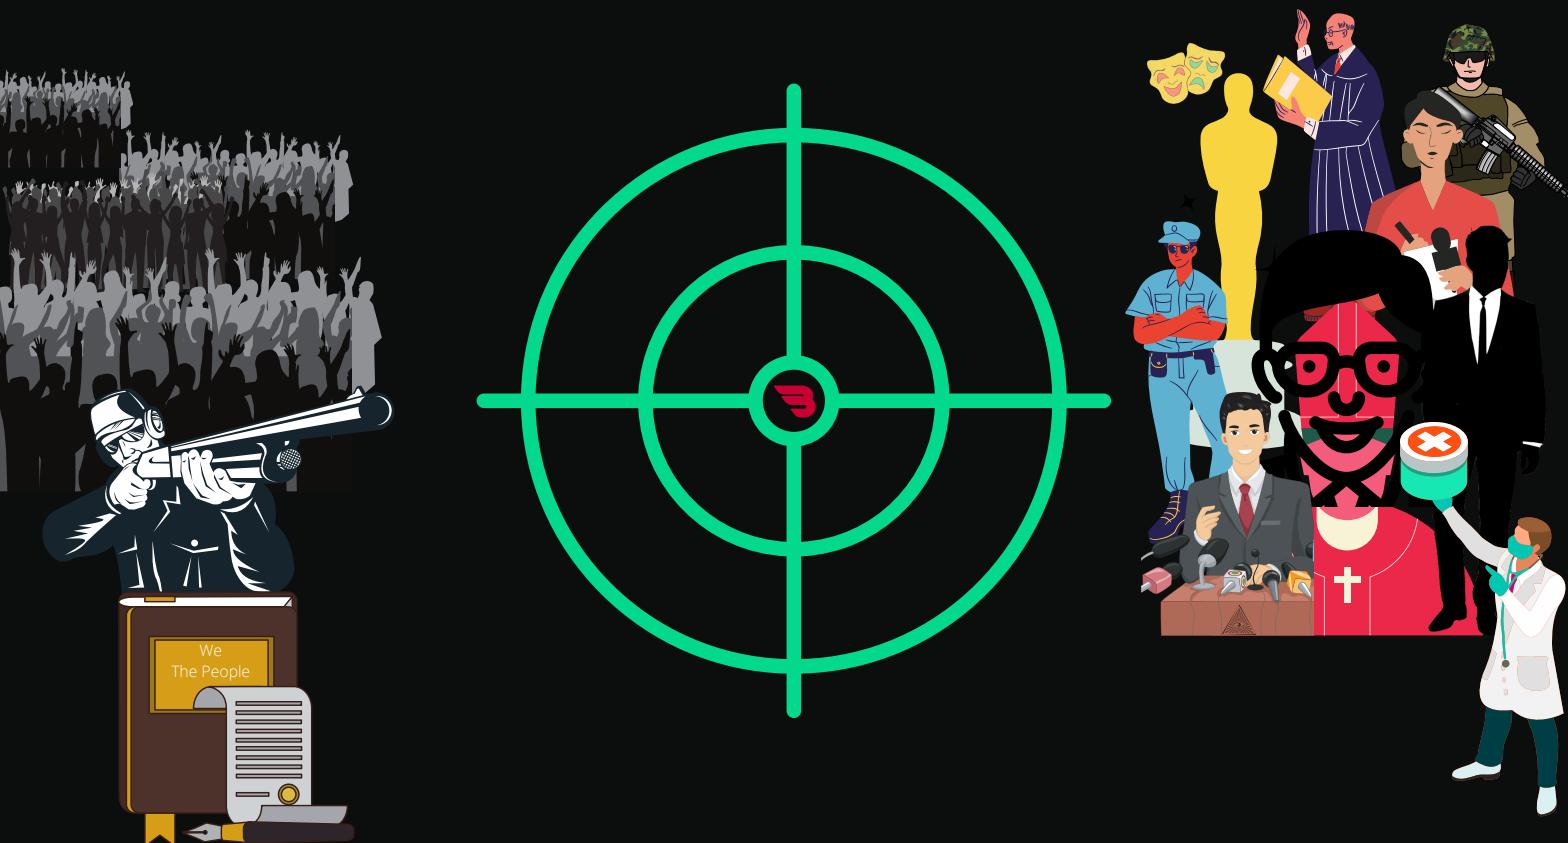

The New World Order whether you believe they exist or not have been dishing out historical levels of fear and terror around the world, and it only seems to be getting worse. Even if you haven't been or understand what [Red Pilled](#) means there is something deep within your mind that keeps telling you, [There Is Something Wrong With The World](#). No longer can we ignore these messages from our higher self. We've been [down the rabbit hole](#) and now we know who's responsible for turning the world up side down.

Games Objective

PART II

Now that we have created a means for funding through the NWO Bounty Hunters (NWOB) token project, [Let The Games Begin!](#) Our project cannot move forward without you, as your investment in the (NWOB) token is what drives the game build, bounty rewards, and support teams. As the game evolves targets will increase to include minions of the NWO, Hollywood Pedos, Agents of Evil, and others who peddle fear for control and financial gain. Currently we have around 10,000 targets for the game but this number will surely increase as the onion is peeled back completely.

Recon[®] Rewards

Not everyone can be a Runner & Gunner in the game, so there is a **Recon Rewards** system for individuals and teams

who would rather focus on gathering intel. Gaining intelligence on high profile members of the NWO leaders, and

underlings will become increasingly difficult as they start running for the hills, and underground bunkers. The recon

element of the game becomes ever so important, if each mission objective is to be completed with a deletion from the game. The game standard uses a proof of action system that can be easily verified before token swaps will move forward.

On the token itself is the amount of the reward offered for project recon, so there is no question about Gamer's ROI.

Live real world game that anyone can play. NWO Bounty Hunters takes every one of your favorite Player One video games and brings them to life. Isn't it time the NWO felt the pain and fear they've been dishing out?

Hell Yeah!

Real World Tokens

A Real World Token (RWT) is minted separate from any metaverse activities. The uniquely identifiable token also carries an Easter Egg which is revealed only after token distribution, for coin authentication.

On the back of the (RWT) is a blockchain address where (NWOB) token (SEED) Scoundrel Eradication Electronic Donation is redeemed. The acceptance of the (RWT) is confirmed only after the (SEED) is withdrawn from the associated crypto account address. The crypto (SEED) varies and is deducted from full bounty. Never redeem (SEED) without full understanding of the objective.

Accepting the (SEED) with the intent of theft automatically activates the (IBC) Instant Bounty Collection via a second (RWT) released on the original (RWT) bounty. Every system in the game is created with redundancies for the complete protection of the system. Don't Take It Lightly.

On the reverse side of the (RWT) is a target name ie. **Gill Bates, Jill Quinton, Tom Franks, or maybe a group** like shareholders of a company building large wealth by harming people. NWO Bounty Hunters rely heavily on recon intel therefore recon is the closest and only potential contact in the game. More game release updates Coming Soon!

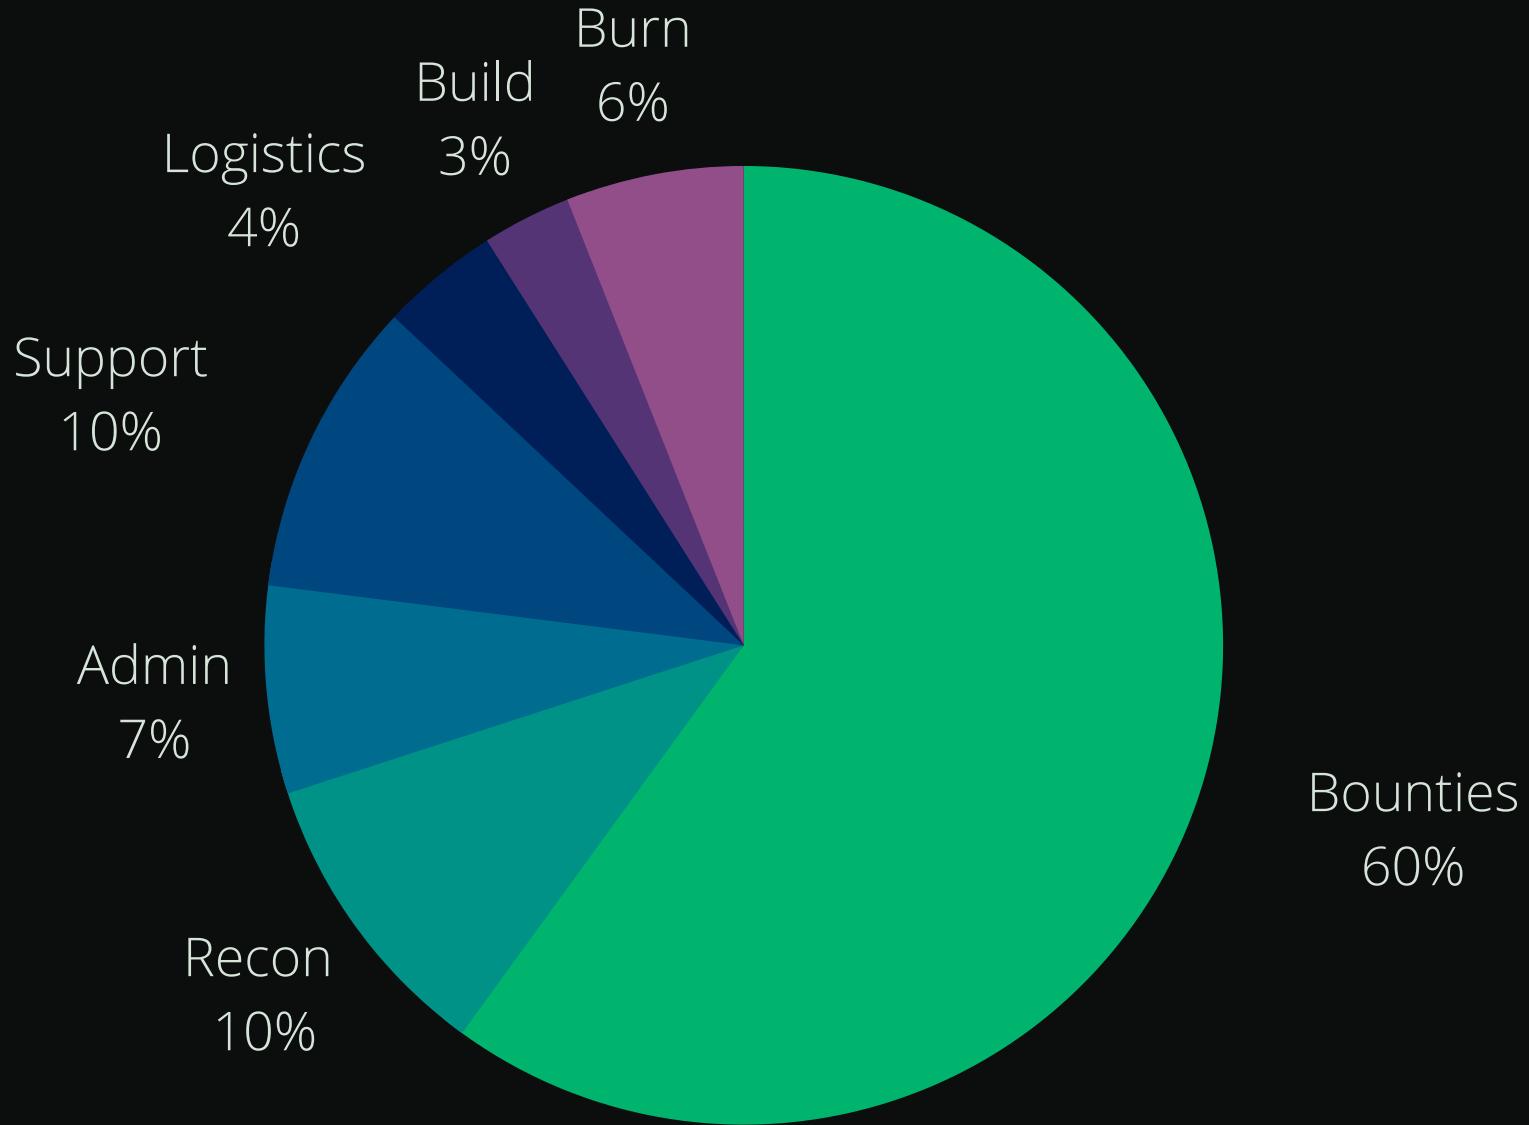

Tokenomics

Token Name-----	NWO Bounty Hunters Token
Ticker-----	NWOB
Total Supply--	1,000,000,000,000,000 \$NWOBOUNTYHUNTERS
Decimals-----	12
Chain-----	Binance Smart Chain
Standard-----	BEP-20
Class-----	Utility/Governance
Supply Model-----	Deflationary

Tokenomics

All bounties are dictated by the tokens market value, which ultimately means by the community.

Moving Forward

PHASE 01

Listing on Exchanges such as;
Binance, CoinGecko, Coinbase

PHASE 02

Sell a Shit Load of Tokens

PHASE 03

Development, Testing, and
Response

PHASE 04

Start Game, Monitor, and
Paying Out Rewards
